PaperCut for Education
Cut the Costs of Student Printing

Designed for schools and universities of all sizes, PaperCut is simple to install and starts tracking users immediately.

Take the frustration out of everyday printing.

Give staff and students the answers to everyday problems.

Wasteful printing and large documents tie up our printers

You can set an upper document size to stop unusually large print jobs. Other filters include a maximum number of copies, color and duplex printing. There is even a filter to stop "double submitted" jobs caused by accidentally clicking the print icon twice.

Users don't like change

PaperCut is designed to be phased into production. You can implement silent monitoring as a first phase, then add quotas and printer rules, and introduce user pays printing when the processes are well established. Our Implementation Guide will show you how to roll out PaperCut without disrupting the workflow of your staff and students.

"Guest" account users and wireless users are anonymous on the network

Anonymous users can be authenticated for printing using the PaperCut client software, a hold/release queue or PaperCut's user web tools.

Set Per Page Costs for Users

Pays for Itself

Designed for Education

Self Maintaining

Staff and students can bring any mobile device, there's no standardization

No matter what device your students and staff have–iPads, Chromebooks or leased laptops, you can apply your network policies while delivering easy access to print.

Print management systems are too expensive

Our special educational pricing won't break your budget because you won't pay extra for the number of servers, workstations, printers or operating systems on your network. Your savings, from reduced consumption or from offsetting printing costs with user pays printing, means that PaperCut is software that truly pays for itself!

You want a system that integrates with your current internet sites and policies

You can tailor the end-user web interface to look like part of your internet. If you want to further extend PaperCut or provide additional integration with your systems, you can use the full set of APIs included as standard with PaperCut, fully documented with example source code.

Deploying software on workstations is difficult and time consuming

PaperCut does not require software on each workstation. There is optional client software, but if you decide to use it, you can run it using the "zero-install" method that launches the software from the PaperCut server.

You don't have a large staff to install and administer a print management system

PaperCut is self-maintaining with features like automatic synchronization with users, groups and printers, automatic configuration of new user accounts and automatic periodic quotas. Users can add value to their own accounts with "top up cards" or by using the optional payment gateway for credit card payments using online systems like PayPal. Browser-based one-click reports and scheduled automatic email reports make it easy to monitor and report activity.

The IT department appears "reactive" to problems rather than "proactive"

PaperCut automatically tracks printer errors and can be configured to send email or SMS messages to admin or helpdesk staff when a printer requires attention.

PaperCut:
cut waste
track printing
save money

"The initial investment has already been recouped in our first year of use."

▲TMCC
Truckee Meadows Community College

"Without quotas, our students were printing around 2 million pages per year. After quotas, that number dropped in half."
